Kauan Fonseca

Backend-leaning Full-Stack Developer

Brazil (UTC-3) · Open to remote roles · kauanfvale@gmail.com · linkedin.com/in/kauanfon · github.com/kaufon

SUMMARY

Backend-leaning developer with about 1.5 years of professional experience on IoT and SaaS products for gas and water metering: Python services (FastAPI, gRPC, Redis), React Native screens and GitLab CI/CD delivery. Builds personal projects with spec-driven development (SDD) and has hands-on experience with Claude Code and AI agents working together with projects. Finishing a degree in Multiplatform Software Development in early 2027.

EXPERIENCE

Tecsus · IoT and SaaS for gas and water metering · Brazil

Junior Software Developer (contractor) Aug 2025 – Present

Part of a 9-person product team (3 developers, 3 web-ops, 1 tester/support, 1 PO, 1 PM). Started in backend, moved to full-stack, and now also covers mobile and QA.

- Build and maintain Python backend services (FastAPI, gRPC, Redis) for two gas and water metering SaaS products, one of them spanning 7 repositories; gRPC connects the projects.
- Migrated a messy legacy Oracle database to PostgreSQL in a 6-month project (about 7 million rows; often 4 old tables became 1); a health check showed 98% of data preserved (Python, asyncpg, Alembic).
- Wrote an Ansible playbook that runs SAST (Semgrep) and DAST (OWASP ZAP) scans inside the GitLab CI/CD pipeline.
- Built React Native screens that print to Zebra printers over Bluetooth (ZPL, 512+ bytes/s), with local storage in MMKV.
- Maintain GitLab CI/CD pipelines (formatter, linter, unit tests) and work with Docker and Grafana.
- Write tests with pytest; use AI coding agents for project context and test generation.
- Review teammates' merge requests from a QA angle when asked.

Software Development Intern · Started in backend (Python); promoted in Aug 2025 May 2025 – Aug 2025

SKILLS

Professional experience: Python, FastAPI, gRPC, Redis, asyncpg, Alembic, pytest, multithreading, Oracle-to-PostgreSQL migrations, Ansible, SAST/DAST (Semgrep, OWASP ZAP), GitLab CI/CD, Docker, Grafana, React Native, MMKV, React (basic)

AI workflow: Claude Code, AI coding agents, spec-driven development (SDD)

Team and personal projects: TypeScript, Next.js, NestJS, Flutter, Fastify, Prisma, MQTT, ESP32, PostgreSQL

Practices: code review, Scrum, Linux (daily driver)

PROJECTS

Animus · Legal AI mobile app for Xertica (Fatec team project) github.com/CtrI-Alt-Del/animus

Analyzes initial court petitions and finds relevant legal precedents (FastAPI, Flutter, Qdrant, Google Gemini). Built Flutter screens and tests, the mobile polling endpoint and the notification triggers for petition analysis and precedent searches.

Gaia · Low-cost weather stations for Tecsus github.com/CtrI-Alt-Del/gaia

Built the ESP32 IoT firmware and the NestJS backend: sensors send wind, rain, humidity, temperature and pressure readings over MQTT (HiveMQ), and the backend feeds a web portal with dashboards.

Stocker · Inventory management web app github.com/CtrI-Alt-Del/stocker

Full-stack: Next.js (main area) and part of the Fastify API (Prisma, Supabase); only administrators can perform critical actions.

EDUCATION AND LANGUAGES

Fatec São José dos Campos Expected early 2027

Tecnólogo (3-year degree) in Multiplatform Software Development. Semester-long team projects with Scrum, including real clients (Xertica, Tecsus).

English: C2 Proficient, EF SET certified (reading and listening) · **Portuguese:** native cert.efset.org/pt/SUnTQ9
